

Press Release

Control Risks and One Voice announce joint next-generation crisis management online service

Tuesday 29 September 2015, Control Risks and One Voice today announced a new partnership that brings together the worlds of crisis management consulting and incident management software in a new web-based service, Crisis Resilience Online (CRO). CRO - a secure and flexible online tool that enables companies to manage their crisis management programmes - is easily accessible from any web enabled device and helps organisations to respond quickly and effectively to an incident by enabling them to:

- Build, maintain and audit their crisis management capability
- Alert and communicate, using cutting edge mass notification software
- Collaborate with teams in any location and at all levels of an organisation

Richard Fenning, CEO of Control Risks, said: 'This innovative new product, *Crisis Resilience Online*, will support clients as they develop and maintain their crisis management capability, and enable them to evaluate and audit performance and processes after an incident is resolved. Our joint solution with One Voice will be an excellent addition to our crisis and security expertise and our range of online information and analysis tools.'

The partnership brings together a market leader in crisis and incident management consultancy and a leading supplier of technical tools for planning and efficient handling of incidents across organisations. Control Risks has 40 years of experience in crisis and security consulting, while One Voice offers world-class software for comprehensive crisis management. By coming together, the two firms will provide the most complete incident management tool in the market, combining expertise and technical capability.

'I am delighted with our new partnership with Control Risks and honoured to be chosen as a partner after their global search for best-in-class crisis management solutions. This move is in line with our strategy to make our crisis management system available in the international market. We believe that the fusion of their expertise and consulting experience with our innovative system is the perfect combination to take the market for professional crisis management to the next level,' commented Kjetil Mollan, CEO, One Voice.

Resilient organisations will have a well-developed approach to crisis management that supports them as they prepare, respond and recover in the event of a crisis. At each stage, Control Risks' information tools, analytics and consultancy combine seamlessly with the capabilities of *Crisis Resilience Online* to deliver a flexible and robust solution. The integrated emergency and mass communication tool improves the efficiency of crisis management teams and allows companies to communicate with large numbers of employees in a variety of locations. The shared goal of the partnership is to help our clients react quickly and effectively to any incident, anywhere in the world, that threatens their people, environment, assets and reputation.
